

DIGITAL CAMERA AND PHOTOGRAPHING DISPLAY FOR DISPLAYING IMAGES

ABSTRACT OF THE DISCLOSURE

5

In a digital still camera body, a liquid crystal display (LCD) panel displays images at both the front and rear of the camera, is provided. In addition, a front back-light attaching space, and a rear back-light attaching space are also formed to attach a back-
10 light unit. To display a subject image as a non-inverted image seen from the rear side, the back-light unit is attached in the front back-light attaching space. On the other hand, to display a subject image as a right to left inverted image seen from the front side, the back-light unit is attached in the rear back-light attaching space.
